About the SNE Society

OUR MISSION

The mission of the Society for Neuroeconomics is to:

1. **Foster research on the foundations of economic behavior by promoting collaboration and discussion among scholars from the psychological, economic, and neural sciences.**
2. **Ensure the continued advancement of the field of neuroeconomics by supporting young researchers.**

The Society promotes this mission through annual meetings for presentation of original theory and research, and through educational programs to promote development of a common language and set of methodological tools for the field.

Welcome from the President

Dear Colleagues,

I am delighted to extend a warm welcome to all of you, both seasoned SNE conference veterans and those for whom this is your first SNE conference experience, as we gather for the 2023 Annual Conference of the Society for Neuroeconomics in the stunning city of Vancouver, British Columbia, Canada. On behalf of the entire organizing committee, it is my privilege to invite you to immerse yourselves in an intellectually stimulating experience over the next three days.

Neuroeconomics, at the intersection of economics, neuroscience, and psychology, has witnessed remarkable growth in recent years. This year's conference promises to be a platform for sharing cutting-edge research, fostering collaborations, and expanding our collective understanding of the intricate neural mechanisms that underpin economic decision-making. I am thrilled to announce that we have the honor of hosting Professor Lise Vesterlund as our distinguished Kavli Plenary Speaker for this conference. Professor Vesterlund's pioneering work in experimental economics has significantly advanced our understanding of gender differences in economic behavior, social preferences, and decision-making. Her contributions to the field have been both groundbreaking and inspirational, and we eagerly anticipate her plenary address, which promises to be a highlight of our conference program. In addition, we are pleased to offer two workshops presented by two distinguished experts: Dr. Hendrikje Nienborg and Prof. Ryan Oprea.

In addition to the enriching scientific program, we invite you to explore the city of Vancouver and take advantage of the diverse social activities we have arranged that include walking, biking, Halloween activities, visiting galleries, Granville Island Public Market, and a thrilling FlyOver Canada. These activities are an excellent opportunity to unwind, network with fellow attendees, and experience the rich culture and natural wonders of Vancouver.

I would like to extend my heartfelt appreciation to our sponsors, volunteers, and the dedicated members of the program committee who have worked tirelessly to ensure the success of this event.

I encourage you all to actively participate, ask questions, and engage in discussions throughout the conference and workshops. Your contributions are what make this gathering exceptional, and I am confident that your insights will inspire future research and innovation in neuroeconomics. I hope that the 2023 Annual Conference of the Society for Neuroeconomics will be a memorable and intellectually rewarding experience for each and every one of you.

Thank you for being a part of this vibrant community, and I look forward to engaging with you all during the conference.

Warm regards,

Agnieszka Tymula

President, Society for NeuroEconomics

Her lab uses computational, behavioral, pharmacological, functional imaging, large-scale electrophysiological, and, through collaboration, machine learning approaches to address the following questions: 1) how are cognitive and sensory signals integrated in the brain during visually guided decisions? 2) how do context, such as motivation, behavioral state or learning, influence the encoding of the incoming sensory signals? 3) how are these combined signals used when we make decisions? Her group aims to help answer these questions in healthy mammalian brains.

Gendered Work Assignments: Cause and Consequence

Lise Vesterlund, University of Pittsburgh

All organizations have work that no one wants to do: planning the office party, screening interns, attending to that time-consuming client, or simply helping others with their work. From office housework to important assignments that inevitably go unrewarded, a woman, most often, takes on these tasks. The talk will present research on the source and consequences of these differences, and will discuss the small but significant changes that can help women and their organizations reach their potential.
